**Summary of testing:****Tests performed (name of test and test clause):**

COMMISSION REGULATION (EU) No 206/2012  
 COMMISSION REGULATION (EU) No 626/2011  
 (EU)2016/2282  
 (EU)2017/254  
 (EU)2023/2048

The length of refrigerant lines between indoor unit and outdoor unit was 5m.

The tests were performed on model TAC-12CHSD(043977)/UA111.

And the results listed as below:

Items	Declared values	Measured values
SEER	8,5	8,522
SCOP (Average)	4,7	4,712
SCOP (Warmer)	5,9	5,919
SCOP (Colder)	3,7	3,705
Cooling, energy efficiency class	A+++	A+++
Heating (Average) , energy efficiency class	A++	A++
Heating (Warmer) , energy efficiency class	A+++	A+++
Heating (Colder) , energy efficiency class	A	A

**Testing location:**

<b>General product information:</b>	
<p>Split-type air conditioner for household use only, the refrigerant is R32.  The appliance has cooling and heating functions.  The appliance was assembled with a variable speed motor-compressor KSN98D31UEZA31 (GMCC).  For the mode series TAC-12CHSD(043977)/*1, *can be Z, HA, IA, KA, HC, JC, KC, HD, KD, JE, KE, WE, LF, IF, KF, VA, VB, VC, VD, VE, VF, XA11, XA21, XA31, XA41, XA51, XA61, XA71, XA72, XA81, XA82, XA91, XAA1, XAB1, XAC1, XAD1, XAE1, YA11, YA21, YA31, TP11, TP21, TP31, TP41, TP51, TP61, TP71, TP72, TP81, TP91, TPA1, TPB1, TPG11, TPH21, TPG21, TPG31, UA11, UA12, UG11, UG21, UG31, UA21, TPH11, TPH21, DWA, LGA to indicate the different appearance of panel.  Model S12P9S1, TAC-12CHSD/UG11V3A and model TAC-12CHSD(080002)/*1 are identical except the model number.  The Tdesign for cooling mode was 35°C (OU).  For average temperature condition:  The Tdesign for heating mode was -10°C (OU), and TOL was -15°C (OU), Tbivalent was -7°C (OU).  For warmer temperature condition:  The Tdesign for heating mode was 2°C (OU), and TOL was 2°C (OU), Tbivalent was 2°C (OU).  For colder temperature condition:  The Tdesign for heating mode was -22°C (OU), and TOL was -22°C (OU), Tbivalent was -15°C (OU).</p>

<b>COMMISSION REGULATION (EU) No 206/2012</b>			
Cl.	Requirement-Test	Result-Remark	Verdict
1	For the purposes of compliance and verification of compliance with the requirements of this Regulation, measurements and calculations shall be made using harmonised standards the reference numbers of which have been published in the <b>Official Journal of European Union</b> , or other reliable, accurate and reproducible method, which takes into account the generally recognised state of the art methods, and whose results are deemed to be of low uncertainty. They shall fulfill all of the following technical parameters.	EN 14825: 2022; EN 50564: 2011 EN14511-2: 2022; EN14511-3: 2022; EN 12102-1: 2022 used	P
2	The determination of the seasonal energy consumption and efficiency for seasonal energy efficiency ratio (SEER) and seasonal coefficient of performance (SCOP) shall take into account:		P
	(a) European cooling and heating season(s), as defined in Table 1 below;		P
	(b) reference design conditions, as defined in Table 3 below;		P
	(c) electric energy consumption for all relevant modes of operation, using time periods as defined in Table 4 below;		P
	(d) effects of the degradation of the energy efficiency caused by on/off cycling (if applicable) depending on the type of control of the cooling and/or heating capacity;		P
	(e) corrections on the seasonal coefficients of performance in conditions where the heating load can not be met by the heating capacity;		P
	(f) the contribution of a back-up heater (if applicable) in the calculation of the seasonal efficiency of a unit in heating mode.		N/A
3	Where the information relating to a specific model, being a combination of indoor and outdoor unit(s), has been obtained by calculation on the basis of design, and/or extrapolation from other combinations, the documentation should include details of such calculations and/or extrapolations, and of tests undertaken to verify the accuracy of the calculations undertaken (including details of the mathematical model for calculating performance of such combinations, and of measurements taken to verify this model).		P
4	The rated energy efficiency ratio (EER rated) and, when applicable, rated coefficient of performance (COP rated) for single and double duct air conditioners shall be established at the standard rating conditions as defined in Table 2 below.		N/A
5	The calculation of seasonal electricity consumption for cooling (and/or heating) shall take into account electric energy consumption of all relevant modes of operation, as defined in Table 3 below, using operational hours, as defined in Table 4 below.		P

Cl.	Requirement-Test		Result-Remark	Verdict
ANNEX II	Energy efficiency classes			—
1	The energy efficiency of air conditioners shall be determined on the basis of measurements and calculations set out Annex VII.			P
	Both the SEER and SCOP shall take into account the reference design conditions and the operational hours per relevant mode of operation, and the SCOP shall relate to the heating season 'average', as laid down in Annex VII. The rated energy efficiency ratio (EER rated) and the rated coefficient of performance (COP rated) shall relate to standard rating conditions, as laid down in Annex VII.			P

ANNEX IV	Product fiche		—																																																											
1	The information in the product fiche shall be given in the order specified below:		—																																																											
	(a) supplier's name or trade mark;		P																																																											
	(b) model identifier of the indoor air conditioner or of the indoor and outdoor elements of the air conditioner;		P																																																											

<b>COMMISSION REGULATION (EU) No 626/2011</b>			
Cl.	Requirement-Test	Result-Remark	Verdict
	(c) without prejudice to any requirements under the Union eco-label scheme, where a model has been granted a 'European Union eco-label' under Regulation (EC) No 66/2010, a copy of the eco-label may be added;		N/A
	(d) inside and outside sound power levels at standard rating conditions, on cooling and/or heating modes;		P
	(e) the name and GWP of the refrigerant used and a standard text as follows:		P
	'Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to [xxx]. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be [xxx] times higher than 1 kg of CO <sub>2</sub> , over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.'		P
2	Additionally, the following information shall be included in the product fiche on air conditioners on the cooling mode, when efficiency is declared on the basis of the seasonal energy efficiency ratio (SEER):		—
	(a) the SEER and the energy efficiency class of the model (model of a unit or of a combination of units) determined in accordance with definitions and test procedures in Annex I and VII for the cooling mode as well as with the class limits defined in Annex II;		P
	(b) the indicative annual electricity consumption $Q_{CE}$ in kWh/a during the cooling season, determined in accordance with definitions and test procedures in Annex I and VII, respectively. It shall be described as: 'Energy consumption "XYZ" kWh per year, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.'		P
	(c) the design load $P_{designc}$ in kW of the appliance in cooling mode determined in accordance with definitions and test procedures in Annex I and VII, respectively;		P
3	Additionally, the following notes define the information to be included in the fiche on the heating mode, when efficiency is declared on the basis of seasonal coefficient of performance (SCOP):		—
	(a) the SCOP and the energy efficiency class of the model, or combination, in heating mode determined in accordance with definitions and test procedures in Annex I and VII, respectively, as well as with the class limits defined in Annex II;		P

<b>COMMISSION REGULATION (EU) No 626/2011</b>			
Cl.	Requirement-Test	Result-Remark	Verdict
	(b) the indicative annual electricity consumption for an average heating season $Q_{HE}$ in kWh/a, determined in accordance with definitions and test procedures in Annex I and VII, respectively. It shall be described as: 'Energy consumption "XYZ" kWh per year, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.'		P
	(c) other designated heating seasons for which the unit is declared fit for purpose, with options of warmer (optional) or colder (optional) seasons, as defined in Annex I;		N/A
	(d) the design load $P_{designh}$ in kW of the appliance in heating mode determined in accordance with definitions and test procedures in Annex I and VII;		P
	(e) the declared capacity and an indication of the back up heating capacity assumed for the calculation of SCOP at reference design conditions.		P
4	Additionally, the following notes define the information to be included in the fiche of air conditioners, when efficiency is declared on the basis of energy efficiency ratio (EER rated) or coefficient of performance (COP rated):		—
	(a) the energy efficiency class of the model, determined in accordance with definitions and test procedures in Annex I and VII, as well as the class limits defined in Annex II;		N/A
	(b) for double ducts, the indicative hourly electricity consumption $Q_{DD}$ in kWh/60 minutes determined in accordance with definitions and test procedures in Annex I and VII. It shall be described as: 'Energy consumption "X,Y" kWh per 60 minutes, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.'		N/A
	(c) for single ducts, the indicative hourly electricity consumption $Q_{SD}$ in kWh/60 minutes determined in accordance with definitions and test procedures in Annex I and VII. It shall be described as: 'Energy consumption "X,Y" kWh per 60 minutes, based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.'		N/A
	(d) the cooling capacity $P$ rated in kW of the appliance determined in accordance with definitions and test procedures in Annex I and VII;		N/A
	(e) the heating capacity $P$ rated in kW of the appliance determined in accordance with definitions and test procedures in Annex I and VII.		N/A
5	One fiche may cover a number of appliance models supplied by the same supplier.		N/A

<b>COMMISSION REGULATION (EU) No 626/2011</b>			
Cl.	Requirement-Test	Result-Remark	Verdict
6	The information contained in the fiche may be given in the form of a copy of the label, either in colour or in black and white. Where this is the case, the information listed in points 1-4 not already displayed on the label shall also be provided.		N/A
ANNEX V	Technical documentation		—
	The technical documentation referred to in Article 3 (1)(c) shall include at least the following items:		—
	(a) the name and address of the supplier;		P
	(b) a general description of the appliance model, sufficient for it to be unequivocally and easily identified. Single ducts shall be referred to as 'local air conditioners'		P
	(c) where appropriate, the references for the harmonised standards applied;		P
	(d) where appropriate, the other calculation methods, measurement standards and specifications used;		N/A
	(e) identification and signature of the person empowered to bind the supplier;		P
	(f) where appropriate the technical parameters for measurements, established in accordance with Annex VII:		P
	(i) overall dimensions;		P
	(ii) specification of the type of the air conditioner;		P
	(iii) specification whether the appliance is designed for cooling or heating only or for both;		P
	(iv) the energy efficiency class of the model as defined in Annex II;		P
	(v) The energy efficiency ratio (EER rated) and coefficient of performance (COP rated ) for single and double duct air conditioners or seasonal energy efficiency ratio (SEER) and seasonal coefficient of performance (SCOP) for other air conditioners;		P
	(vi) The heating season for which the appliance is declared fit for purpose;		P
	(vii) Sound power levels expressed in dB(A) re1 pW, rounded to the nearest integer;		P
	(viii) the name and GWP of refrigerant used.		P
	(g) the results of calculations performed in accordance with Annex VII. Suppliers may include additional information at the end of the above list.		P

<b>COMMISSION REGULATION (EU) No 626/2011</b>			
Cl.	Requirement-Test	Result-Remark	Verdict
	Where the information included in the technical documentation file for a particular air conditioner model has been obtained by calculation on the basis of design, or extrapolation from other equivalent appliances, or both, the documentation shall include details of such calculations or extrapolations, or both, and of tests undertaken by suppliers to verify the accuracy of the calculations undertaken. The information shall also include a list of all other equivalent appliance models where the information was obtained on the same basis.		N/A
ANNEX VI	Information to be provided in the cases where end-users cannot be expected to see the product displayed		—
1	The information referred to in Article 4(b) shall be provided in the following order:		—
	(a) The energy efficiency class of the model as defined in Annex II;		P
	(b) for air conditioners other than single ducts and double ducts:		P
	(i) the seasonal energy efficiency ratio (SEER) and/or seasonal coefficient of performance (SCOP);		P
	(ii) the design load (in kW);		P
	(iii) the annual electricity consumption;		P
	(iv) the cooling and/or each heating ('Average, Colder, Warmer') season the appliance is declared fit for purpose;		P
	(c) for single duct and double duct air conditioners:		N/A
	(i) the energy efficiency ratio (EER) and/or coefficient of performance (COP);		N/A
	(ii) the rated capacity (kW);		N/A
	(iii) for double ducts, the hourly electricity consumption for cooling and/or heating;		N/A
	(iv) for single ducts, the hourly electricity consumption for cooling and/or heating;		N/A
	(d) Sound power levels expressed in dB(A) re1 pW, rounded to the nearest integer;		P
	(e) Name and GWP of refrigerant used.		P
2	Where other information contained in the product information fiche is also provided, it shall be in the form and order specified in Annex IV.		P
3	The size and font in which all the information referred in this Annex is printed or shown shall be legible.		P

**Part 1: Declared values and the necessary information provided by manufacturer**

<b>Table 1:</b>				<b>P</b>			
<b>Information requirements for air conditioners, except for double duct and single duct air conditioners.</b>							
(the number of decimals in the box indicates the precision of reporting) Information to identify the model(s) to which the information relates to:							
Function (indicate if present)				If function includes heating: Indicate the heating season the information relates to. Indicated values should relate to one heating season at a time. Include at least the heating season 'Average'.			
Cooling		Y		Average (mandatory)		Y	
Heating		Y		Warmer (if designated)		Y	
				Colder (if designated)		Y	
Item	symbol	value	unit	item	symbol	value	unit

Contact details for obtaining more information	TCL Air Conditioner (Zhong Shan) Co., Ltd. 59 Nantou Road West, Nantou, Zhongshan, Guangdong, China						
(*) For staged capacity units, two values divided by a slash (/) will be declared in each box in the section 'Declared capacity of the unit' and 'declared EER/COP' of the unit.							
(**) If default Cd = 0,25 is chosen then (results from) cycling tests are not required. Otherwise either the heating or cooling cycling test value is required.							
In as much as is relevant in view of the functionality, the manufacturer shall supply the information as requested in the above Table 1 in the technical documentation of the product. For units with capacity control marked 'staged', two values for the highest and lowest, noted 'hi/lo' divided by a slash (/) will be declared in each box under 'Declared capacity'.							

<b>Table 2: Information requirements for single duct and double duct air conditioners</b>			N/A
Information to identify the model(s) to which the information relates to [fill in as necessary]:			
Description	Symbol	Value	Unit
Rated capacity for cooling	$P_{\text{rated for cooling}}$	—	kW
Rated capacity for heating	$P_{\text{rated for heating}}$	—	kW
Rated power input for cooling	$P_{EER}$	—	kW
Rated power input for heating	$P_{COP}$	—	kW
Rated Energy efficiency ratio	$EERd$	—	—
Rated Coefficient of performance	$COPd$	—	—
Information to identify the model(s) to which the information relates to [fill in as necessary]:			
Description	Symbol	Value	Unit
Power consumption in thermostat-off mode	$P_{TO}$	—	W
Power consumption in standby mode	$P_{SB}$	—	W
Electricity consumption of single/double duct appliances (indicate for cooling and heating separately)	$DD: Q_{DD}$ $SD: Q_{SD}$	—	DD: kWh/a SD: kWh/h
Sound power level	$L_{WA}$	—	dB(A)
Global warming potential	$GWP$	—	kgCO <sub>2</sub> eq.
